

IICRC - APPROVED

WATER DAMAGE RESTORATION TECHNICIAN (WRT)

It is amazing what technology has changed in just the past few years as it relates to drying techniques. At one time, the industry blanketed the concept of “suck it up, apply something to make it smell better, and then put out a few fans to help it dry”. Even today, this is the norm for a majority of the companies. Unfortunately, that mindset of contractors, mitigation companies, and the insurance industry is what has led to major lawsuits as well as development of courses such as Mold Remediation.

Why should someone that has been handling water losses for many years attend this course? The below items are but a small list of what will be learned in class with the latest technology in knowledge, instrumentation, and inspections.

The course includes:

- ❖ **FOUR** mandatory principles of proper restorative drying procedures
- ❖ Just how does water **affect** building components (carpet, wood, drywall)
- ❖ **Psychrometry** – What is it and how to make it **SIMPLE**?
- ❖ How do we dry **Hardwood, Paneling, Cabinets, etc**?
- ❖ Hands-on **Monitoring** of your water job in a mini-structure
- ❖ **Permeance** – just what is this and how does it affect the drying project?
- ❖ What is the effect of **Vapor Pressure** and just how do we control it?
- ❖ How to **DRY** wall interiors, wood flooring, ductwork, insulation, crawl spaces
- ❖ Procedures for handling a **clean** water loss as well as **unsanitary** losses
- ❖ What is the difference in **Categories** of water losses and **Classes** of water losses and **how does each affect** drying, equipment usage / set-up, liabilities?
- ❖ Learn how to simply compute, on the job, the age-old question of “**Just how much** drying equipment do I use? **How do I set it up** for effective drying? Will the insurance industry **understand, agree, and pay** for this?
- ❖ **Much more** including inspection procedures, biocides, microorganisms, and also including **drying procedures** for carpet, pad, subfloor, wood flooring, walls, crawl spaces and sewage backflows.
- ❖ **MINIMIZE** your liability with answers.

Don't let old techniques stay in your way of becoming a true water loss professional. This class is packed with information, limited hands-on techniques for class participation, and latest technology. Be a leader today for the property owners as well as the insurance industry. If you do not feel by lunch of the first day that you have learned more that you knew before coming to this class, you will be given your money back. Guaranteed. This course will move you light years ahead in your journey of becoming a Water Damage Restoration professional.

IICRC-APPROVED
APPLIED STRUCTURAL DRYING (ASD)

Location: National Center for Advanced Training
2 West 3rd Street
Anniston, AL 36201
(800) 346-4841

Time: 8:00 am – 5:00 pm
(Central Standard Time)

Instructor: Scott Mims

The National Center for Advanced Training houses approx. 1500 sq. ft. of residential home, fully functional with different carpet types, substrates, wood flooring, sheetrock, wallpaper, cabinets, vinyl floor covering, and with furnishings also. This training center is used for advanced training with hands-on experience in structural drying, fire cleanup, oriental / area rug cleaning, as well as carpet repair/reinstallation. The facility can also house training for the Applied Microbial Restoration Technician (AMRT/S) course.

Why Should You Attend the ASD Training?

This course helps train the student to dry the entire structure from top to bottom using different types of equipment and different methods of drying dependant upon situation at hand.

The course teaches you to dry:

- ❖ Hardwood flooring
- ❖ Different types of carpets
- ❖ Different installation of carpets
- ❖ Carpet and padding (cushion)
- ❖ Subflooring (different types, e.g. OSB, plywood, concrete)
- ❖ Contents remaining on-site
- ❖ Wall Cavities
- ❖ Crawlspace
- ❖ HVAC ductwork
- ❖ Metal studs
- ❖ Insulation
- ❖ Finish trim
- ❖ Doors/windows

Students get first hand experience with full participation from the class in many areas to include:

- ❖ Extraction methods – using most up-to-date equipment
- ❖ Using psychrometry to make educated decisions in drying daily
- ❖ Extensive monitoring of the jobsite with interactive classroom / jobsite training
- ❖ Class participation in all phases of the extraction and drying

This class is open to business owners, technicians, insurance adjusters, insurance agents, property management / real estate industry agents, and anyone interested in learning how to dry structures properly.

Learn how to know and effectively understand the following:

- ❖ Myths and misconceptions of pad removal
- ❖ Myths and misconceptions of mold/mildew problems with water damage
- ❖ When there is enough electricity and how to effectively overcome when not
- ❖ Effective use of instruments and drying tools that are needed
- ❖ Drying with positive and negative pressures
- ❖ Heat application

Registration Fees:

Regular registration: \$895.00
2 or more students: \$850.00
