## Grout Sealer

This grout sealer utilizes a unique formula to achieve all the benefits of solvent-based grout sealers in a water based product. It resists soils, stains, chemical degradation, biological growth, and even efflorescence and offers excellent oil and water repellency and hold-out. Yet, Grout Sealer is vapor permeable so it lets water vapor out but does not let liquid water in!

This is a very affordable product that is outstanding on grout and can be used on any other porous tile such as quarry or Saltillo. It provides exceptional protection at a price point you and your customers will love.

- Provides Exceptional Protection For Hard Surfaces With Little Or No Change In Appearance
- Excellent Oil And Water Repellency and Hold-Out
- Resists Soils, Stains, Chemical Degradation, Biological Growth, Efflorescence
- Vapor-Permeable
